

Ambrosia beetle infestations: which photos to take

1. Picture of tree showing dying parts.

2. Picture to identify tree including tree number, leaves, flowers/seeds, stem/bark.

3. Zoom in on affected area.

4. Zoom in on holes, scrape bark off one hole to show tunnel.

Compiled by ZW de Beer, FABI. https://www.fabinet.up.ac.za/

- 5. Use a knife or chisel to cut a square of bark around the entrance hole.
- 6. Carefully peel the bark to expose the tunnels penetrating the sapwood and the fungal stain surrounding it.

- 7. Photograph any pieces of wood with parts of galleries exposed to show the fungal stain.
- 8. If possible or available, photograph a cross section of the trees showing the structure of the beetle tunnels.
