

## **FABIANS GET A SNEAK PEEK OF SOME OF SOUTH AFRICA'S BRIGHTEST YOUNG SCIENTISTS**

Every year, hundreds of Grade 7s and 12s, descend on the University of Pretoria's L.C. de Villiers Sports Campus to take part in the Northern Gauteng Science Fair and transform the Rembrandt Hall into a science wonderland. The fair is the oldest science school fair in South Africa and brings together more than 500 young scientists from across the province to showcase their science talent, from computer science to food science.

On 17 August, a number of FABlans went along to help judge the creative projects on display and give some encouragement to the next Elon Musk, Senamile Masango and Janice Limson in the room. The halls were filled with excited scientists; those at their colourful boards and those walking the rows taking it all in. The 10 FABlans who judged were Dr Markus Wilken, Darryl Herron, Frances Lane, Kira Lynn, Aysha Ndou, Bernard Smit, Nicole Soal, Julianie Stapelberg, Ariska van der Nest and Adri Veale.
